

Synovial Flex

Advanced™

Synovial Flex Advanced™ is a soft chew specifically formulated to support joint function. Offering enhanced levels of key ingredients: glucosamine HCl, chondroitin sulfate, MSM, EPA, and DHA, to provide building blocks for synovial fluid, cartilage, and connective tissues.

KEY INGREDIENTS:

Glucosamine HCl helps maintain synovial fluid that lubricates joints. It may also stimulate the production of proteoglycans, which help maintain the health and resilience of joints and connective tissues.

Chondroitin Sulfate helps ensure adequate shock absorption and nourishment of the tissues that line the joint.

Methylsulfonylmethane (MSM) helps support cartilage and collagen building blocks.

Eicosapentaenoic Acid (EPA) & Docosahexaenoic Acid (DHA) Omega-3 Fatty Acids to help support a normal inflammatory response for occasional joint discomfort.

Proprietary Blend: Manganese Sulfate, Zinc Sulfate, Citrus Bioflavonoids, Alpha Lipoic Acid, Grape Seed Extract, and Sodium Selenite. This blend provides critical co-factors for cartilage and collagen synthesis and helps fight free radicals generated by exercise.

Use Synovial-Flex Advanced™ for:

- Large breed dogs
- Senior dogs
- Active adult dogs
- Working dogs
- Agility dogs
- Large breed puppies
