

TRP-Tri-COX[®] Soft Chews

Joint Support for Dogs

Joint concerns affect approximately 11% of the 90 million dogs in the United States.¹ 25% of dog owners give vitamins or supplements to their dogs. Products for joint and mobility are the most popular.²

Ceva offers an innovative, palatable soft chew containing UC-II[®] collagen: TRP-Tri-COX[®], to help ease occasional joint stiffness. Study results showed significant improvement after 2 months, with maximum results seen 5 months after use.³

UC-II[®]

A proprietary collagen extract that may help relieve joint inflammation associated with normal daily exercise and activity by supporting a healthy immune response. UC-II[®] has been shown to be effective in helping relieve occasional joint discomfort in dogs.³

ACTIVE INGREDIENTS:

UC-II[®] is a patented collagen extract that helps support the normal function of the immune system within the joint.

Boswellia Serrata and Omega-3 Fatty Acids, Eicosapentaenoic Acid (EPA), & Docosahexaenoic Acid (DHA) help support a normal inflammatory response which may help relieve occasional joint discomfort.

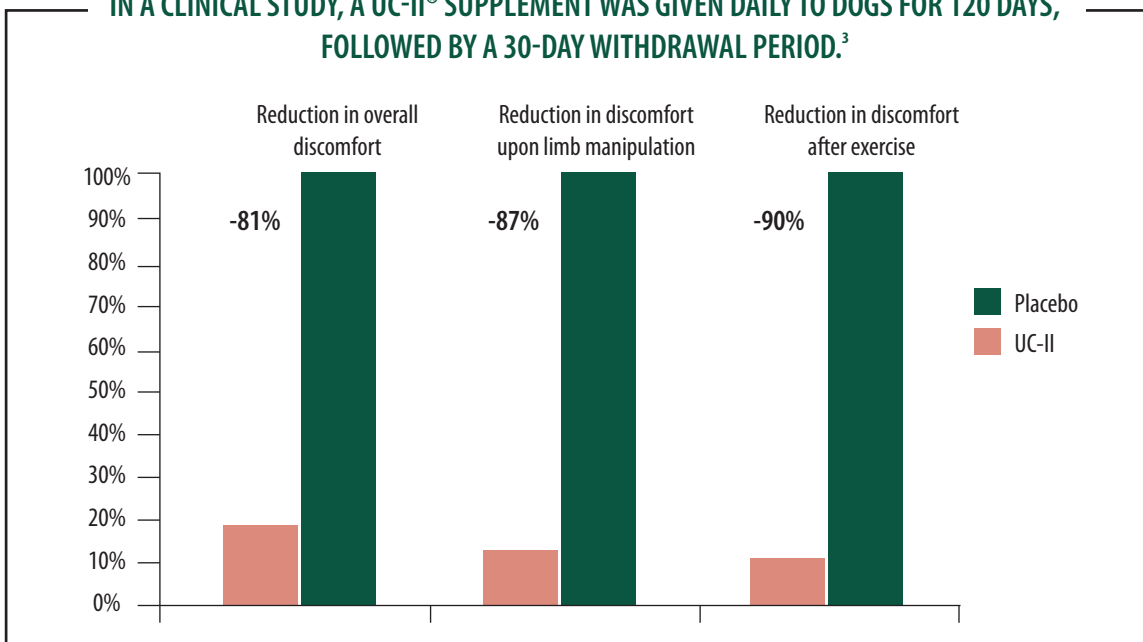

Astaxanthin is 6000 times more potent than Vitamin C.⁴ Antioxidants help fight damaging free radicals that attack healthy cells.

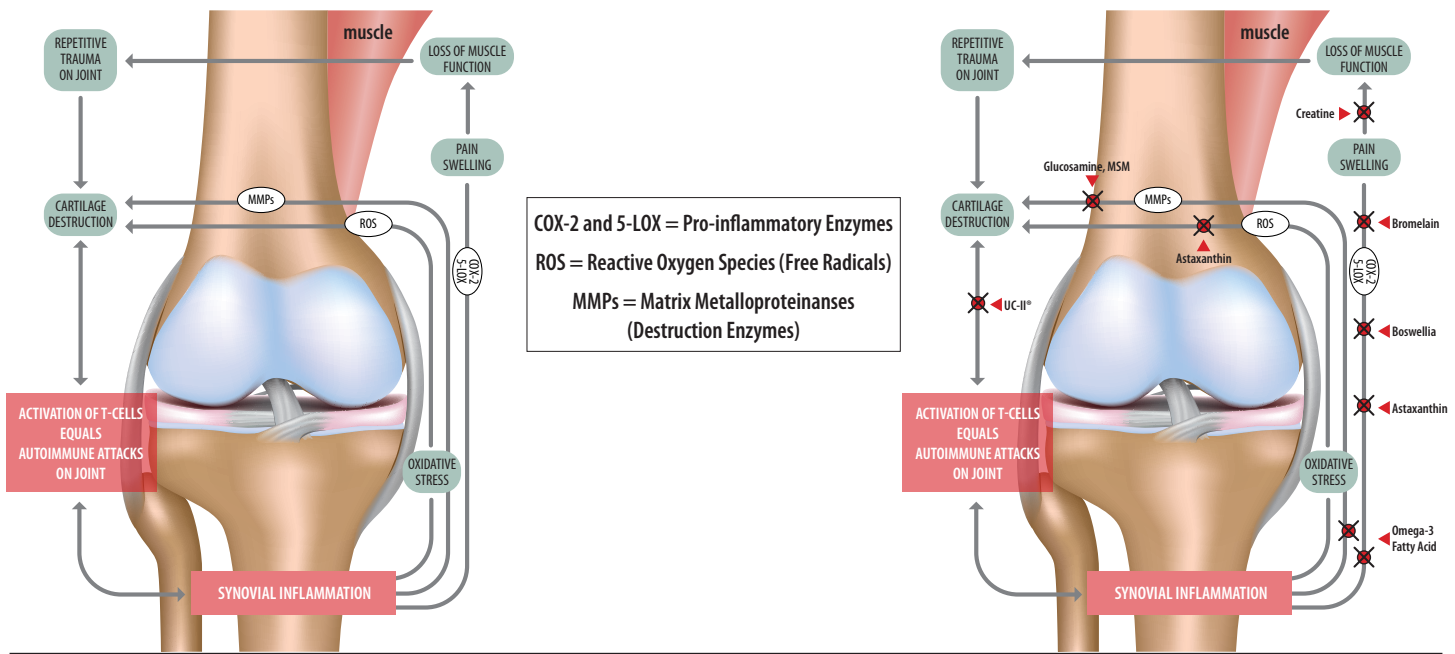

Glucosamine HCl & Methylsulfonylmethane (MSM) provide cartilage and collagen building blocks.

Creatine Monohydrate helps support muscle cells by delivering energy, which is required for physical activity such as exercise.

Bromelain helps support normal muscle recovery after strenuous activity or exercise.⁵

IN A CLINICAL STUDY, A UC-II[®] SUPPLEMENT WAS GIVEN DAILY TO DOGS FOR 120 DAYS, FOLLOWED BY A 30-DAY WITHDRAWAL PERIOD.³

Directions for Use: Dosage should be doubled during the initial period of 4-6 weeks. Best when taken on a full stomach.
