

Vectra 
3D[®] for Dogs

Protection for the way
your dog lives.

From dog park Dachshunds

to backyard Boxers

Active, social dogs need tailored protection
from disease-infested biting insects.

Vectra[®] 3D for dogs provides 30-day protection
against fleas, ticks, mosquitoes, lice, mites (excluding
mange mites) and biting & sand flies.

DO NOT USE ON CATS

Ask your veterinarian about Vectra® 3D for Dogs.

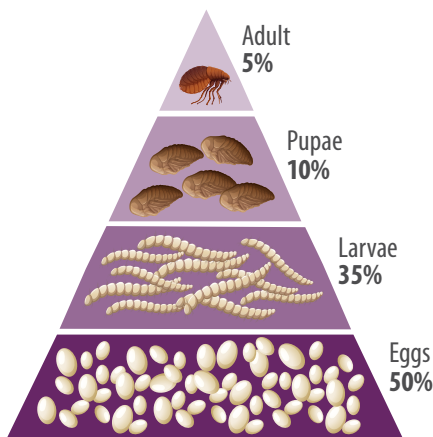

Vectra® 3D is for dogs and puppies weighing at least 5 lbs. and 8 weeks of age or older.

EFFECTIVE:

- Kills fleas in 4 hours, breaking the flea lifecycle
- Kills fleas, ticks and mosquitoes through contact
- No bite required - minimizes the risk of infected parasites spreading disease and illness

EASY TO APPLY: Long, rounded tip makes it comfortable for your dog, and easy for you to get through the fur, applying directly to the skin.

EASY TO COMPLY: Vectra® 3D for Dogs monthly application makes it easy to pair with a monthly heartworm preventive. It also remains effective after bathing and swimming, 24 hours after application.

The Flea Pyramid

Flea infestations can be a real pain – and the adult fleas you see are only 5% of the total infestation. The remainder of the infestation is eggs, larvae and pupae in your home environment. A single dose of Vectra® 3D for Dogs effectively stops flea infestations and prevents re-infestations on your dog for one month. If you have a flea infestation, it can take up to 3 or 4 months of use to completely get rid of all of the immature life stages in your home.
